Custom Web Designing

Hey,

We are a full-service web design & development studio located in India. We offer a variety of website solutions to meet your needs. This includes a basic online presence that clearly and effectively communicates your messages through to premium websites that require highly advanced features and customizations.

By working with us you gain access to a team of consultants that will recommend how to design and build a website that will:

- Meet your marketing and communication objectives
- Use professional graphic design to bring your ideas into being
- Transform your goals into online success

We design tools that market your organization and communicate your mission to others. We begin with a relationship. We work to understand your organization, your needs and your desires. We collaborate with you to plan a solution, design and create an online tool that works for you, and then we assist you in maintaining and supporting that solution.

So what are you waiting for? Drop us an email with your project requirements.

It would be best to have telephone or skype discussions so that we can better understand your objective and target.

Thanks,

Rekha

Internet time theft

Unauthorized Accessing of Computer

Unauthorized Access to Computer
Unauthorized access is when someone gains access to a website, program, server, service, or other system using someone else's account or other methods.
For example, if someone kept guessing a password or username for an account that was not theirs until they gained access it is considered unauthorized access.

From Wikipedia, the free encyclopedia
Beginning on 27 April 2007, a series of cyberattacks targeted websites of Estonian organizations, including Estonian parliament, banks, ministries, newspapers and broadcasters, amid the country's disagreement with Russia about the relocation of the Bronze Soldier of Tallinn, an elaborate Soviet-era grave marker, as well as war graves in Tallinn.[1][2] Most of

E-Mail Bombing

There's a malicious zip file titled "42.zip". It's known as a "zip bomb" because its file size is only 42 kilobytes. But when it's uncompressed,it expands to 4.5 petabytes (4,500,000 gigabytes), crashing the antivirus program and then the system.

Nuances on Cybercrime with special reference to Data Diddling - A study

Dr.J.Star,M.L.,

Ph.D., Assistant Professor of Law, CDAGLC, Pattaraiperumbudur.

Abstract

The ingenuity of cyber criminals is becoming clear when we look at the clever ways in which online frauds are being perpetrated. cyber criminals combines elements of fake, falsification and lost trust to obtain sensitive personal data like credit card details, PIN numbers, passwords, etc. of victims. The attackers then cheat the victims by using such personal information. Other forms of cyber crimes include illegal access to data, hacking, alteration of information and E-mail based offences. Data diddling is an unauthorized altering of data before or during entry into computer system and changing it same after the processing is done. As the original

Web Jacking

GEEKSFORGEEKS
Web Jacking
Illegally seeking control of a website by taking over a domain is known as Web Jacking. In web jacking attack method hackers compromises with the domain name system (DNS) that resolves website URL to IP address but the actual website is never touched. Web jacking attack method is another type of social engineering phishing attack where an attacker create a fake web page of victim website and send it to the victim and when a victim click on that link, a message display on the browser “the site abc.com has move on another address, click here to go to the new location” and if a victim does click on the link, he/she will redirect on the fake website page where an attacker can ask for any sensitive data such as credit card number, username, password etc. Web jacking attack method is one kind of trap which is spread by the attacker to steal the sensitive data of any people, and those people got trapped who are not aware about cyber security. Web Jacking Attack Method:
